

INSIGHT.AI

Local Document Intelligence

Document	Setup and User guide
Version	1.1
Audience	Client - AKA Studio
Project	Project INSIGHT.AI

1. Introduction

INSIGHT.AI is a local AI-powered offline document assistant that allows users to query, summarise, and extract information from its organisation's documents using natural language. All processing happens entirely on the user's machine and no data is ever sent or shared to external services or third parties.

This guide walks the user through all the setup steps, which are to be executed only for one time in the computer that this will live on, and also explain how to use the system on a daily basis. The setup takes approximately 20-30 minutes depending on internet speed and system capacities.

For this system to work properly, there are some system requirements for the computer that is going to run it.

Component	Minimum	Recommended
Operating system	Windows 10 macOs 12 Ubuntu 20.04	Windows 11 macOS 14 Ubuntu 22.04
RAM	8 GB	16 GB or more
Storage	10 GB free	20 GB+ free
GPU	Not required (runs on CPU)	Dedicated GPU with 4 GB + VRAM
Python	Python 3.10+	Python 3.13
Ollama	Latest stable release	Latest stable release

2. Setup Guide

In this implementation there are some steps that only need to be completed once, since after completing them the model already lives in the user's computer and the user only needs to click a file to launch INSIGHT.AI

2.1 One-Time Setup

Step 1 - Install Python

Python is the programming language that powers INSIGHT.AI, this is the core for the model to run.

1. Go to <https://www.python.org/downloads/windows/> in the browser
2. Search the specific python version (3.13.12)
3. Download the specific python version (3.13.12) by clicking at 'Download Windows installer (64-bit)'.

Note that Python 3.13.12 cannot be used on Windows 7 or earlier.

▪ Download [Windows installer \(64-bit\)](#)

4. Run the installer
5. Once the installer opens, on the first screen tick the box that says **"Add Python to PATH"**.
 - a. **Note: If this box is not ticked the system will not work.**
6. Complete the installation (all the following default options are correct)

Step 2 - Install Git

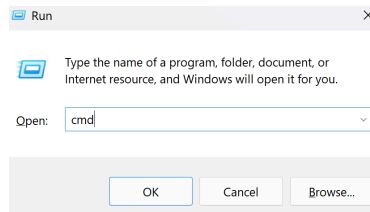

Git is used to download the INSIGHT.AI files into the user's computer to then execute the model

1. Go to git-scm.com/downloads in the browser
2. Click **Download for Windows**
3. Click **'Click here to download'**.
4. Run the installer
5. All the default options are correct, click next on all screens.

Step 3 - Download INSIGHT.AI

This step downloads all the INSIGHT.AI files into the user's computers using Git

1. Press **Windows Key + R**, when the following window appears type **cmd** and press Enter to open a command window.

2. When the command window opens, type the following command and press Enter:

```
git clone https://github.com/danielcha04/ProjectINSIGHT.AI.git
```

3. Then navigate into the folder, by typing **cd ProjectINSIGHT.AI** in the prompt.

```
C:\Users\pauca>cd ProjectINSIGHT.AI
```

Step 4 - Set Up the Environment

This step installs all the components that INSIGHT.AI requires to run. **In the same command window**, run the following commands one at a time.

1. Create the environment:

```
python -m venv venv
```

2. Activate it:

```
venv\Scripts\activate
```

3. Install all required components:

```
pip install -r requirements.txt
```

Note: if step 2 gives a 'scripts disabled' error, run the following command first: `Set-ExecutionPolicy -ExecutionPolicy RemoteSigned-Scope CurrentU`

Step 5 - Install Ollama

Ollama runs the AI language model locally on the user's machine.

1. Go to ollama.com in the browser
2. Click **Download for Windows** and run the installer
3. Once installed, open a command window and run the following:

```
Ollama pull llama3.2:3b
```

Notes: this download can take up to 20 minutes depending on internet speed, please do not close the command window until it completes.

Step 6 - Verify the Setup (Final step)

Run this command to confirm that everything is installed correctly:

ollama list

Note: once this step is complete the user should be able to see llama3.2:3b in the list.

Once the user has fully completed all these steps, the setup is complete. Then they will not need to repeat these steps again on that device.

3. Launch INSIGHT. AI

After the one-time setup steps are complete, the user should follow these steps each time they want to use INSIGHT.AI.

Step 1 - Start the Application

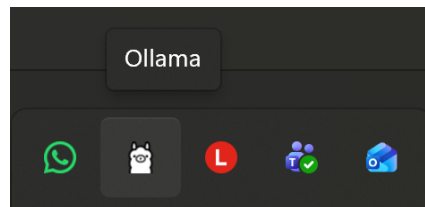

Navigate to the INSIGHT.AI_folder on your computer and double-click run.bat.

A command window will appear, and then the browser will automatically open at **<http://localhost:8501>** showing the INSIGHT.AI dashboard.

If it is the **first time** you open the system, there is the possibility of receiving a message like the following: 'Welcome to Streamlit! If you'd like to receive helpful onboarding emails, news, offers, promotions, and the occasional swag, please enter your email address below. Otherwise, leave this field blank.' Just click **Enter** to open the dashboard.

Note: Ollama must be running in the background for the system to work. The user should see its icon in the system tray. If it's not running, open Ollama from the Start menu before launching the app.

Step 2 - Index documents

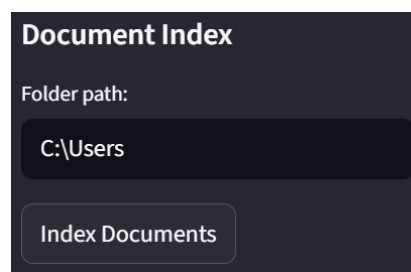

Before the user can start asking questions, it needs to tell the system where the required documents are.

1. In the left sidebar, a Folder path field is available
2. Enter the full path to the folder containing the documents to be retrieved.

C:\Users\Name\Documents\Finance

3. Click Index Documents
4. Wait for the green success message to appear, this can take 1 to 2 minutes for large folders.

Reminder: the system supports PDF, Word (.docx), and Excel (.xlsx) files.

Step 3 - Ask Questions

Once the documents are indexed, the user can start typing questions using natural language in the chat box at the bottom of the screen.

It is recommended for the user that when referring to the contents of a specific document, it states its whole name of document including the extension. For example: "Can you summarise the contents of 'Finance report.docx'?"

Note: the system will only answer based on the indexed documents. If it cannot find the information, it will tell you clearly rather than guessing.

4. Managing indexes

An index is a processed version of your documents INSIGHT.AI uses to answer questions. The user can create multiple indexes for different folders and switch between them.

Action	How to solve it
Create a new index	Enter the folder path and click Index Documents
Switch to a different index	Use the select index dropdown and click "Load Index"
See which documents are indexed	Click the Documents in this index expander in the sidebar
Delete and index	Select it from Remove Index dropdown and click "Clear Index"
Update an index with new files	Add files to the folder and click Index Documents again - changes are deleted automatically.

5. Possible trouble

Problem	Solution
App does not open in browser	Manually go to http://localhost:8501 in the browser
The system is 'Thinking' for too long	This is normal for complex questions. Wait up to 2 minutes. If it times out, try rephrasing the question more simply.
The following message appears: <i>"Index documents first"</i>	Enter a folder path and click Index Documents before asking questions.
Document not found in responses	Make sure the document is in the indexed folder and the index was created after adding the file. Re-index if needed.
Ollama not responding error	Open Ollama from the Start menu and wait 30 seconds, then refresh the browser page.

6. Tips for Best Results

- **Ask specific questions:** instead of asking 'summarise this', ask 'summarise the key financial metrics in the Q3 report' for a more accurate answer.
- **Re-index after adding files:** if you add new documents to a folder, click Index Documents again - the system will detect and include the new files.
- **Check the active index indicator:** make sure the green status bar at the top of the page shows the right folder before asking questions.
- **Excel best practices:** for best results with Excel files, ensure each sheet has clear column headers in the first row and one table per sheet.
- **Excel file indexing:** When indexing an Excel file with multiple sheets, every sheet will be indexed as a separate document so it never gets split mid-row when chunking.
